## Comments Sought Proposed Tentative Interim Amendments

The following Tentative Interim Amendments (TIAs) have been proposed to NFPA. They are being published for public review and comment. Comments should be filed with the Secretary, Standards Council, by the date indicated below.

These proposed TIAs have also been forwarded to the responsible technical committee for processing. The technical committee will consider public comments received by the date indicated below before vote is taken on the proposed TIA. (Please identify the number of the TIA to which the comment is addressed.) Three-fourths of the voting members of the technical committee and/or the technical correlating committee, if any, must vote in favor of the TIA on both

technical merit and emergency nature as calculated in accordance with 3.3.4.5 of the Regulations Governing Committee Projects to establish a recommendation for approval of the TIA.

The Standards Council will review the technical committees' ballot results, the public comments, and any other information that has been submitted when it considers the issuance of the TIA at the next Standards Council meeting. In accordance with 1.6.2(c) of the Regulations, a proposed TIA which has been submitted for processing pursuant to 5.1 of the Regulations will be automatically docketed as an appeal on the agenda of the Standards Council, and any party may advocate their position either in writing or in person before the Council. If an automatically docketed appeal has not been pursued by any party, the Council need not consider the matter as an appeal.

A TIA is tentative because it has not been processed through the entire codes- and standards-making procedures. It is interim because it is effective only between editions of the document. A TIA automatically becomes a proposal of the proponent for the next edition of the document. As such, it then is subject to all of the procedures of the codes- and standards-making process.

*National Fuel Gas Code*

**TIA Log No.: 984**

**Reference:** Section 8.3

**Comment Closing Date:** April 16, 2010

**Submitter:** National Fuel Gas Code Committee

1. In Section 8.3, Purging replace the existing text with 8.3.1 through 8.3.6 as follows:

8.3\* **Purging.** Purging shall be in accordance with 8.3.1 through 8.3.6.

8.3.1 **Where Required.**

8.3.1.1 The purging of piping systems shall be in accordance with 8.3.2 through 8.3.6 where the piping system meets either of the following:

- (1) The designed operating gas pressure is greater than 2 psig.
- (2) The piping being purged contains pipe sizes greater than 2 inch.

8.3.1.2\* Where piping systems not covered under 8.3.1.1 are purged with fuel gas, the discharge point, whether indoor or outdoor, shall be attended and monitored with a combustible gas indicator and purging shall be stopped when fuel gas is indicated at the discharge point.

8.3.2 **Removal from Service.** When existing gas piping meeting 8.3.1 is to be opened for an addition, or modification, or service, the section to be worked on shall be isolated from the gas supply

and the line pressure vented in accordance with 8.3.4. When gas piping meeting the criteria of Table 8.3.2 is removed from service, the residual fuel gas in the piping shall be displaced with an inert gas.

**Table 8.3.2 Length of Piping Requiring Purging with Inert Gas for Servicing or Modification**

Nominal Pipe Size (in.)	Length of Piping Requiring Purging (ft)
2½	>50
3	>30
4	>15
6	>10
8 or larger	Any length

For SI units, 1 ft = 0.305 m.

**8.3.3 Placing in Operation.** When gas piping meeting the criteria of Table 8.3.2 containing air is placed in operation, the air in the piping shall first be displaced with an inert gas. The inert gas shall then be displaced with fuel gas in accordance with 8.3.4.

**8.3.4 Outdoor Discharge of Purged Gases.** The open end of piping systems being pressure vented or purged shall discharge directly to an outdoor location complying with all of the following requirements:

- (1) The point of discharge shall be controlled with a shutoff valve.
- (2) Discharge point shall be at least 10 ft (3 m) from sources of ignition, located a minimum of 10 ft (3 m) from building openings and a minimum of 25 ft (7.6 m) from mechanical air intake openings.
- (3) During discharge, the open discharge point shall be continuously attended and monitored with a combustible gas indicator.
- (4) Purging operations introducing fuel gas shall be stopped when 90% fuel gas by volume is detected within the pipe at the point of discharge.
- (5) All persons not involved in the purging operations shall be evacuated from the area within 25 ft (7.6 m) of the point of discharge.

**8.3.5 Placing Appliances and Equipment in Operation.** After the piping system has been placed in operation, all appliances and equipment shall be purged and then placed in operation.

**8.3.6\* Combustible Gas Indicator.** The combustible gas indicator used during purging operations shall be calibrated in accordance with the manufacturer's instructions and recommended schedule. The combustible gas indicator shall numerically display a lower explosive limit scale from 0% to 100% in a maximum 2% resolution, or gas volume equivalent, for safety monitoring, and 5% to 100% volume in a maximum 1% resolution for pipe purge operations. All combustible gas indicators shall be listed.

**A.8.3** The process of purging a gas pipe of fuel gas and replacing the fuel gas with air or charging a gas pipeline that is full of air with fuel gas requires that a significant amount of combustible mixture not be developed within the pipeline or released within a confined space. Natural gas and propane suppliers add a distinctive odor to their gas to aid in its detection. Odorant fade, olfactory fatigue, or an individual's inability to smell the odorant can reduce safety and lead to an inadequate warning of a combustible gas/air

atmosphere. When a new or existing gas system is brought into service, the sense of smell should not be relied upon to detect the presence of gas in the line. A calibrated combustible gas indicator should be used by trained workers whenever there is a potential for a combustible gas/air atmosphere. When a new system is brought into service and unodorized gas is detected, the gas supplier should be contacted to ensure that the supplier is properly odorizing the gas and/or to determine what action is required to correct the absence of odorant.

**A.8.3.1.2** The purging of small piping systems that contain air can be safely conducted with fuel gas, where a moderately rapid and continuous flow of fuel gas is introduced at one end of the line and air is vented out at the other end.

**A.8.3.6** It is recommended during the purge process to monitor oxygen levels when inert gas is used prior to the purging with combustible gas. The instrument manufacturer's instructions should be followed when performing purge operations.

**SUBSTANTIATION:** The purging requirements for purging indoors and outdoors are recommended to be revised to provide increased safety procedures including gas detection, monitoring, and the location of discharge points. Annex A material is added to inform the user to the possibility of odorant detection issues in new and modified piping systems.

**EMERGENCY NATURE:** The proposed TIA intends to offer to the public a benefit that would lessen a recognized (known) hazard or ameliorate a continuing or dangerous condition or situation. The National Fuel Gas Code Technical Committee has proposed this Tentative Interim Amendment to section 8.3 on purging of gas piping because of the Technical Committee's awareness of purging incidents including the investigation findings of the U.S. Chemical Safety and Hazard Investigation Board (CSB). The current requirements of the code provide a performance approach to establishing safe conditions but do not differentiate between the discharge of the purge gas indoors or outdoors. The Committee has determined that the purging provisions should be amended to require gas purging of piping for industrial, commercial and public facilities to be discharged outdoors only. Additional requirements for safe purging of other fuel gas installations have also been included. Information provided by the CSB as part of their investigation highlighted the hazards of discharging purge gas from piping to indoor locations for the Technical Committee. The proposed TIA requires purge gas to be discharged to outdoor locations for industrial, commercial and public facilities and includes additional safety practices.
